

Round table discussion “Energy efficiency measures for maritime supply chains”

On May 31 at the NTUU “KPI” round table discussion named “Energy efficiency measures for maritime supply chains” was held in the framework of the international scientific-technical, methodological conference “Problems of energy management system – PEMS’2016”.

Vice-rector for international cooperation of NTUU “KPI” Professor Sergii Sydorenko and Director of the Institute of Energy Saving and Energy Management Professor Sergii Denysiuk welcomed all participants of the round table.

The reports for discussion were presented by professor at Chair in Maritime Business and Logistics, University of Bremen Hans-Dietrich Haasis and associated professors at Power Supply Department, NTUU “KPI” Oleg Kotsar and Galyna Strelkova.

Institute of Energy Saving and Energy Management, NTUU “KPI” and Chair in Maritime Business and Logistics, University of Bremen cooperate under the project “EnergyWare - Energy Efficiency in Warehousing along Maritime Supply Chains”, supported by the International Cooperation Network for Countries from the Eastern Partnership IncoNet EaP.

The main aims of the EnergyWare project:

- arranging of activities to support the information exchange among partners,
- revealing and selection of other European partners into project consortia based on bi-lateral research networks,
- elaboration of thematic proposal for the Horizon 2020 Energy-Call “Increasing capacities for actual implementation of energy efficiency measures in industry and services”.
